### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 6<sup>th</sup>, 2005 has been entered.

## Response to Arguments

2. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wachtfogel et al. (U.S. PG Pub No. 2002/0138831) in view of Wolf (U.S. PG Pub. No. 2003/00839232).

Art Unit: 3621

5. As per claim 1 and 13 Wachtfogel et al. teaches an advertising system (advertisement in an end user controlled playback environment, 10), which provides advertisements (transmit advertisements) on a display (displaying) of a computer (user unit, 20, 35) through a network (network, 30) communications system (satellite system, 25), comprising storing means (memory, 220) comprising multi-level storage hierarchy for storing advertisements in which multilevel hierarchy gradually fractionalize advertisement areas thereof (see paragraph 0174), categorizing the advertisements according to levels of fractionalization and area sections within the levels (see paragraph 0174), and categorizing the advertisements according to the content thereof (see paragraph 0174), data receiving means (user unit) for receiving from the computer perusal data indicating the levels of fractionalization, the area sections within the levels and the content of the advertisements (see paragraph 0174), retrieving means for retrieving, from information stored in the storing means, advertisements categorized according to the levels of the fractionalization, the area sections and the content of the advertisements, all of which are concerned with the perusal data received by the data receiving means, and data transmitting means for transmitting to the computer advertisement data on the advertisements retrieved by the retrieving means (see paragraph 0175, 0176). Watchfogel et al fail to teach an inventive concept wherein advertisements are arranged into more specific geographic area by categorizing the advertisements as to belong to respective levels of geographic fractionalization within said multilevel storage hierarchy, categorizing the advertisements according to area sections within said respective levels, and categorizing the advertisements according to the content thereof. However, Wolfe et al teaches inventive concept wherein advertisements are arranged into more specific geographic area by categorizing the advertisements as to belong to respective levels of

Art Unit: 3621

geographic fractionalization within said multi-level storage hierarchy, categorizing the advertisements according to area sections within said respective levels, and categorizing the advertisements according to the content thereof (see paragraphs 0048). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the inventive concept of Watchfogel et al to include Wolf's inventive concept wherein advertisements are arranged into more specific geographic area by categorizing the advertisements as to belong to respective levels of geographic fractionalization within said multilevel storage hierarchy, categorizing the advertisements according to area sections within said respective levels, and categorizing the advertisements according to the content thereof because this would have permited advertisements to be specifically targeted at subscribers by creating an infrastructure, system, and methods for delivering these targeted advertisements.

Page 4

6.

7. As per claim 2, Wachtfogel et al. teaches an advertising system wherein the data receiving means further comprises means for receiving from the computer for providing advertisements category data on the levels of the fractionalization with respect to the advertisements, the area sections on the levels and the content of the advertisements; and the storing means further comprises means for storing the advertisements by categorizing them based on the category data received by the data receiving means (see paragraph 0174).

Art Unit: 3621

- 8. As per claim 3, Wachtfogel et al. teaches an advertising system wherein the storing means further comprises means for storing the advertisements containing common content in given area limits within higher levels of the fractionalization (see paragraph 0174).
- 9. As per claim 4, Wachtfogel et al. teaches an advertising system further comprising a counter for counting the number of the advertisements containing the common content in given area limits, according to the content of the advertisements, wherein the storing means further comprises means for storing a higher number of the advertisements containing the common content in given area limits within the higher levels of the fractionalization (see paragraph 0174).
- 10. As per claim 5-8, Wachtfogel et al. teaches an advertising system wherein the computer comprises a mobile computer which is small and portable in size (see fig 1, 2).
- 11. As per claim 9-12, Wachtfogel et al. teaches an advertising system wherein the storing means comprises means for storing both job advertisements as part of the advertisement and employment periods as part of the content of job advertisements and the data transmitting means comprises means for transmitting to the computer advertisement data on job advertisements, enabling the computer to display job advertisements of advertisement data in chronological order according to each employment period (see paragraph 0174).

Art Unit: 3621

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Firmin Backer whose telephone number is (703) 305-0624. The examiner can normally be reached on Mon-Thu 9:00 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on (703) 305-9768. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
